

## Convector Firebox and New Flue - Job 7906

### Unusual Contemporary New Build Property

An upstairs living area in which the owner wished to install an open fire. We advised on a convector firebox which has a dramatically improved efficiency over an open fire.

The installation has a raised firebox over a slate lined log store, both for aesthetic reasons and to meet building regulations which would require a constructional hearth. The fire has a new steel flue, compliant with Building Regulations.

The whole structure is lightweight, designed to sit on a conventional wooden joist floor, with chimney breast in steel and fireproof board.

### Survey – Design – Manufacture – Installation
